

2022 WholeRen White Paper

on Chinese International Student Dismissal and Consequences

WholeRen Group Research Center
May, 2022

About WholeRen Education

WholeRen Group, LLC was established in 2010. WholeRen is a multinational, professional education company which seeks to create and promote Sino-U.S. educational opportunities. We integrate a range of educational services from middle school, high school and college application assistance to academic emergency services, transfer assistance, on-going academic counseling, landing services, executive education programs, winter/summer camps, career planning, homestay services, internship/research opportunities, AI youth education and more. WholeRen was the first U.S. based agency assisting with placements of Chinese students from the U.S. and China to receive Certification from the American International Recruitment Council (AIRC). We have been invited to interview with mainstream media such as CCTV, CGTV, the New York Times, and the Wall Street Journal. We are among the most knowledgeable professionals regarding American and Chinese academic cultural differences and have a dedicated research team that pays close attention to the long-term development of students. The WholeRen Group Research Center devotes itself to research analysis on Chinese international students in America in order to provide accurate consultations based on first-hand data. If you are interested in learning more about WholeRen, we invite you to visit our website: <https://www.wholerengroup.com>.

Abstract

Over the last two decades, the number of Chinese students studying abroad has continued to increase. With abundant educational resources and outstanding instructional quality, the United States continues to be the first choice for Chinese students looking to study abroad. There are more international students from China studying at U.S. universities than international students from any other country. In 2021, approximately 34.71% of international students studying in the United States were Chinese students.¹ Although many Chinese students wish to study in America, it can be a difficult journey. In accordance with the Family Educational Rights and Privacy Act (FERPA), the WholeRen Group Research Center compiled data from 10,848 dismissed Chinese international students who studied in the U.S. from 2013-2022 and utilized WholeRen's services. A random sample of 1000 cases from March 2021 to March 2022, representing the latest trends regarding academic dismissal, were selected to develop this report. The 8th edition of the White Paper on Chinese International Student Dismissal and Consequences ("2022 White Paper") is the latest to our annual White Paper reports since 2014.

The COVID-19 pandemic deeply affected every Chinese student studying abroad. The 2022 edition of the White Paper investigates Chinese international students who were dismissed from U.S. schools, analyzes why they were dismissed, and looks at changes and trends which led to their dismissals. The 2022 White Paper provides valuable data for international students, universities, governments, industry professionals, host families, and all those involved with Sino-U.S. educational exchange.

The data from the past year showed that academic dishonesty became the primary reason for Chinese international student dismissal. During the COVID-19 pandemic, U.S. schools transitioned from traditional in-person classes to online classes and many relaxed the grading system accordingly. For example, many schools used Pass/No Pass grading for online classes. As a result of the relaxed grading system, students who were dismissed due to poor academic performance decreased compared to previous years. However, because of the online class setting, the internet made it very easy for students who lack self-discipline to cheat. We have observed that the number of students who were dismissed due to academic dishonesty spiked in the past year. The 2022 White Paper will focus on the reasons for academic dishonesty.

Part 1 Background Overview

1.1 Overview of Chinese Students in America

Figure 1-1: 2014-2019 The Number of Chinese Students Studying Abroad (Unit: 10,000)

The number of Chinese students studying abroad has gradually increased over the last decade and continues to rise. According to the statistics released by the People's Republic of China's Ministry of Education, the total number of Chinese students studying abroad in 2019 was more than 700,000, indicating an increase of 6.25% from 2018 (Figure 1-1).²

Figure 1-2: The Number of Chinese International Students Studying in Each Country

² Jian Cao (2020, December 14). "2019 Nian Du Chu Guo Liu Xue Ren Yuan Qing Kuang Tong Ji". In the Ministry of Education of the People's Republic of China. Retrieved from http://www.moe.gov.cn/jyb_xwfb/gzdt_gzdt/s5987/202012/t20201214_505447.html

According to the latest data provided by UNESCO (Figure 1-2), Chinese students continue to study abroad globally. With a growing number of Chinese international students each year, the United States remains the most popular destination for Chinese students.³

Figure 1-3: The Number of Chinese International Students Studying in the U.S.

The 2021 Open Doors Report on International Educational Exchange reported that China remained the largest source of international students in the United States in 2020-2021. However, this report also found (Figure 1-3) that Chinese international students significantly declined to 317,299 across undergraduate, graduate, non-degree, and optional practical training (OPT) programs.⁴

Figure 1-4: The Number of Chinese Undergraduate and Graduate Students Studying in the U.S.

³ Global Flow of Tertiary-Level Students. (n.d.). In the United Nations Educational, Scientific and Cultural Organization. Retrieved May 1, 2022, from UNESCO Institute For Statistics.

⁴ Institute of International Education. (2021). "Data by Region Fact Sheets." Open Doors Report on International Educational Exchange. Retrieved from <https://www.iie.org/Research-and-Insights/Open-Doors/Fact-Sheets-and-Infographics/Data-by-Region-Fact-Sheets>

We categorized the students based on their pursued degrees. Figure 1-4 shows that the number of Chinese international students attending undergraduate and graduate programs in the U.S. has continued to increase every year since 2012. However, the number of Chinese international students studying at the undergraduate level has drastically declined by 22,544 in 2021. Like undergraduate students, the number of international students at the graduate level has dropped by approximately 18,201 year over year.⁵

Figure 1-5: 2021 Academic Level Distribution of Chinese International Students Studying in the U.S.

Figure 1-5 highlights that in 2021, the majority of Chinese international students in the U.S. were undergraduate students, who comprised 39.58% of all Chinese international students in the U.S. Graduate students were the second largest group with 37.47% and 20.60% of students were participating in OPT programs with temporary employment. The remaining 2.35% of students were in non-degree programs including language programs and certificate programs.⁶

1.2 Research Intent

Despite the popularity of studying abroad, recent data have shown that the number of Chinese students studying abroad has significantly declined as compared to the last decade. This is primarily due to the COVID-19 pandemic which had unprecedented, widespread impacts on students who had planned to study abroad. The COVID-19 pandemic also brought challenges and burdens to Chinese international students who had already studied abroad, especially to those who lacked independence and preparedness. Left unchecked, these issues have resulted in serious consequences such as academic probation, suspension, and even dismissal.

The 2022 WholeRen White Paper continues the analysis of Chinese international students studying in the United States that previous White Papers began. Our research has found that one reason for Chinese international student dismissal in the U.S. was due to difficulties in adapting to their new environment. When students come to the U.S., they live far away from their family in a completely new environment with a different culture and education system. Thus, it is very likely that the challenges they face will have a negative impact on their academic performance or even lead to behavioral misconduct which, in turn, may lead to warnings or suspension. The COVID-19 pandemic has significantly interrupted education and forced students to take online courses, which made Chinese international students face even more difficulty in adapting to the new environment.

The WholeRen Group Research Center carefully monitors Chinese international students who have been dismissed from school. We continue to collect and analyze data from 2014 to 2022 regarding the causes of dismissal, individual student situations, and further development of these students after dismissal. One of our main focuses is whether or not students who were dismissed are able to continue studying and complete their course of study in the U.S. We hope that what we have learned from our findings can help students get back on track academically and avoid any additional setback.

Part 2 Data Analysis On Students Who Have Been Dismissed

2.1 Data Collection

Data in this report is from WholeRen Group's proprietary database. WholeRen Group was the first professional educational organization in the United States to provide second-chance opportunities for international students who had been dismissed. As such, this database is compiled by America's only organization with an expertise in international students who have previously been dismissed and contains comprehensive information on the students and why they were forced to leave their schools. In the following sections, "we/us" will refer to the WholeRen Group Research Center.

Following the previous 2014-2021 editions of the White Paper, we further continued to examine the age, duration of stay, school location, academic performance, school ranking, and other relevant pieces of information for students who had been dismissed in order to determine the root causes of dismissal. We aim to compile data over the years so that we might acquire a deeper understanding of high-risk international students and the challenges they face.

From 2013 to 2022, WholeRen Group used our proprietary database to compile 10,848 cases of Chinese international students who were dismissed. Of these cases, we used data from 9,976 students whose data sets were complete. These complete cases represent 91.96% of the total cases. 1,137 cases occurred from March of 2010 to March of 2021 and 1,000 of them were randomly selected for the analysis in this report.

In accordance with the scientific method, WholeRen meticulously collects and refines its data.

The simulated entry shown below has been derived from specific cases in WholeRen Group's database:

[Sample Data Example]

When collecting the data, we first obtained student W's basic personal information and academic information to produce the profile below:

Full Name: W	Dismissing School's Type: Private
Gender: Male	Dismissing School's Location: NY
Date of Birth: XX/XX/2001	GPA at Time of Dismissal: 2.6
Age at Time of Dismissal: 21	Year Dismissed: 2021
School Level at Time of Dismissal: Undergraduate	Grade at Time of Dismissal: Second-year undergraduate
Major: Computer Science	Length of Stay in America Prior to Being Dismissed: 2 Years
Dismissing School: University of AA	Reason for Dismissal: Academic dishonesty
The rank of the Dismissing School: 59	

[Analysis Process]

By analyzing the selected sample from WholeRen Group's database, we aim to:

1. Conduct a descriptive analysis of student information
2. Classify and analyze the specific reasons why a student was dismissed
3. Compare and compile historical data and analyze longitudinal trends
4. Put forth a summary of the characteristics of the most vulnerable and high-risk academic demographics among Chinese students
5. Analyze current trends and highlight root causes for dismissal

2.2 Personal Data Analysis

In the 2022 White Paper, we looked at the gender of students at the time of dismissal, degree being pursued, and reasons for dismissal. We then further analyzed the data to understand the trend of Chinese international student dismissals.

2.2.1 Gender Distribution of Dismissed Students

Figure 2-1: 2022 Dismissed Students Gender Distribution

This year, we started by looking at the gender of dismissed students. In 2022, as shown in Figure 2-1, 57.6% of dismissed students were male while 42.4% were female. This is in line with the historical trends as male students are more vulnerable to academic dismissal and still make up the majority of dismissed students.

2.2.2 Academic Level at Time of Dismissal

In this section, the academic level of students at time of dismissal was analyzed in order to observe which group of students are most likely to be dismissed.

Figure 2-2: 2022 Academic Level at Time of Dismissal

As can be seen from Figure 2-2, 73.5% of the students in our sample who were dismissed in 2022 were at the undergraduate level, while 22.6% were at the masters level and 1.7% were at the doctorate level. Only 2.2% were students in high school or younger. Undergraduate students remain the majority of dismissed Chinese international students in 2022.

Figure 2-3: 2022 Academic Grade at Time of Dismissal

If we further divide the groups based on their academic grade at the time of dismissal (Figure 2-3), approximately 3/4 of students who were dismissed in 2022 are at the undergraduate level, which is 73.5% of the total students who were dismissed. Among these students, freshmen have a relatively low dismissal rate (11.9%). From sophomore to senior years, the rates of dismissed students have steadily increased from 18.7% for sophomores, 20.1% for juniors to 22.8% for senior year. Dismissed students at the masters level is 22.6%, which is the second most after the undergraduate level. First year masters dismissal was 11.9%, slightly higher than the 10.7% for second year dismissal level.

2.2.3 Ranking of Schools from which Students were Dismissed

Figure 2-4: 2022 Ranking of Schools from which Students were Dismissed

We analyzed the rankings (U.S. News & World Report) of the schools from which students were dismissed in 2022 and studied the relationship between school rankings and the number of dismissed students. As shown in Figure 2-4, 50.4% of dismissed students came from the top 50 universities in 2022, comprising more than 50% of students who were dismissed in 2022. 20.1% of dismissed students came from schools ranked in the 51-100 range and 29.5% of dismissed students came from schools ranked beyond the top 100. 70.5% of students were dismissed from schools ranked 100 or better.

2.2.4 Location of Student Dismissals

Figure 2-5: Location of Student Dismissals (Data from March 2021 to March 2022)

Reviewing the map in Figure 2-5, we can see that dismissals happened frequently along the western coast, most prominently in California. A large number of cases also occurred on the East Coast (Massachusetts, New York, and Pennsylvania) as well as the Great Lakes region (including Ohio, Illinois, Indiana, Michigan, and others). The areas with the most serious cases are often economically developed, Chinese immigrant centers, and also popular destinations for Chinese students studying in America. In addition, the universities in these areas tend to be ranked higher than those in other locations.

2.3 Analysis of Reasons for Student Dismissal

By analyzing the data from 1,000 students who sought help from WholeRen Group regarding their dismissals between March 2021 and March 2022, we are able to take a closer look at the reasons behind student dismissals, including poor academic performance, academic dishonesty, behavioral misconduct, incomplete understanding of academic policies, and other reasons. As compared to the previous year (Figure 2-6), academic dishonesty is the main reason for academic dismissal and poor academic performance is the second. Compared to 2021, the number of students dismissed due to academic dishonesty in 2022 reduced and the number due to poor academic performance increased (other reasons such as health conditions and low class attendance account for only a small portion of the total students who were dismissed in 2022 and therefore not shown in Figure 2-7).

Figure 2-6 2021 Distribution of Reasons for Student Dismissal

Figure 2-7 2022 Distribution of Reasons for Student Dismissal

Academic Dishonesty

In 2022, academic dishonesty continued to be the most common reason why Chinese international students were dismissed. 67.9% of dismissed Chinese international students were cases related to academic dishonesty. The most common behaviors categorized as academic dishonesty include cheating on tests, impersonation, plagiarism, incorrect citations, application material fraud, and falsifying grades.

Academic dishonesty can be divided into intentional or unintentional behavior. Intentional academic dishonesty most commonly manifests itself in the form of willingly cheating on homework or tests in order to pass a class. Taking exams or completing homework on behalf of someone else has rapidly become its own industry as many students are willing to pay for this kind of service. Since COVID-19 started, the majority of classes have transitioned from in-person to online, and the temptation to cheat or copy someone else's work is greater than before, resulting in increased cases of academic dishonesty.

Unintentional academic dishonesty often occurs due to a lack of understanding with regard to the culture of academic integrity in the United States. Examples of this include incorrect citations when writing papers, not knowing the rules to taking online exams, being generally unfamiliar with habits regarding academic integrity, and not following the school's academic code of conduct.

Poor Academic Performance

26.3% of our student sample were dismissed because of poor academic performance (defined as when a student's GPA is lower than the school's minimum requirement), an increase of 8.8% as compared to the previous year. American colleges and universities generally stipulate that undergraduates cannot have a total GPA under 2.0 and graduate students cannot have a GPA below 3.0. Most often, the first time a student has a low GPA, the school places the student on academic warning or probation. If the academic performance does not improve or if the student has a low GPA for consecutive semesters, the school will likely suspend or dismiss the student. During the pandemic, because of the difficulties that students faced (especially international students), schools relaxed the minimum academic requirement. For example, many schools use Pass/No Pass grading for online classes. As a result of the relaxed grading system, many students who did not meet academic standards were able to continue their studies without academic suspension.

Poor academic performance can also result from low attendance and health issues. Attendance issues occur mainly with younger students. For younger students, living alone in the United States means a lack of regulation from their parents, likely for the first time in their lives. This sudden independence can easily result in "slacking off" and not attending scheduled classes. If academic attendance and progress is irregular, U.S. customs may have reason to suspect that the student has ulterior motives for coming to the United States.

Health issues are another related cause for student dismissal. Health issues encompass both physical and mental illnesses. Students with physical health issues may have difficulty in attending classes, and encounter problems with studying, resulting in poor academic performance and academic dismissal. On the other hand, international students face a great deal of pressure while studying in the United States which lead some to develop mental health issues that affect their studies and occasionally lead to their eventual dismissal. An inability to cope and lack of help-seeking behaviors result in physical and psychological stressors which can impact academic behaviors.

Behavioral Misconduct

In 2022, Chinese international students who were dismissed due to behavioral misconduct accounted for 2.6% of our sample from the past year. Students who fall into this category violate school regulations or U.S. laws by bullying, fighting, engaging in violent behavior, underage drinking, driving under the influence, smoking marijuana, and/or racially discriminating. In America, if a student threatens public security, it is highly probable that in addition to facing dismissal, the student will be subject to a judicial trial and repatriation.

Incomplete Understanding of Academic Policies

Chinese international students who were dismissed due to an incomplete understanding of academic policies accounted for 3.2% of Chinese international students in our sample from 2021 to 2022. These students generally encountered problems such as not registering on time, not enrolling in required courses, and/or not taking enough credits. Since the COVID-19 pandemic, students who did not follow schools' immunization policies have also consequently had problems with their academic study plans. These are avoidable problems which unfortunately occur due to a student's lack of understanding of school policies.

American colleges and universities typically have orientations at the beginning of the academic year, when schools outline general rules and policies. However, missing information - whether due to a language barrier or inattention - can lead to difficulties for all students, including international students. Furthermore, some students do not realize the importance of such events and fail to attend orientation, putting them at a much greater risk for school policy violations.

Part 3 Conclusion

By 2022, 317,299 Chinese international students were studying in the U.S. By analyzing trends of Chinese international student dismissal over the last eight years, we found that the number of students dismissed due to academic dishonesty has continuously increased, exceeding the number of students dismissed due to poor academic performance. American universities have always maintained strict academic policies and thus it is not surprising that international students who have not taken the time to familiarize themselves with such policies will encounter difficulties studying in the U.S. To avoid facing dismissal, Chinese international students need to understand the rules and regulations of American universities, especially with regard to academic integrity and plagiarism. Otherwise, they risk violating their institution's code of conduct and even U.S. laws.

Even if students are dismissed, with timely support they can still have the chance to return to their academics and apply for admission to universities in the United States. Though it can be very tempting for international students to seek "pay-to-stay" schools or illegal institutions to help them maintain their legal status in the U.S., legal options are readily available if a student seeks the appropriate support immediately.

Illegal work authorization will also result in the termination of an I-20. If students need work or internships, they must adhere to the school's international student office regulations, and avoid taking on any illegal work. Otherwise, the student will develop a permanent record which will negatively impact their chances for future study in the United States.

Universities recognize the good characteristics of students. As long as students can reflect after making mistakes, correct themselves, and improve their performance, many schools are willing to offer students a second chance. Students who have a record of academic dismissal can still return back to the right track after solving the root cause.

The development of this White Paper benefited significantly from the input and support provided by the outstanding staff in the WholeRen Group Research Center and WholeRen Group. In particular, we thank Sa Guo, Chao Wang, Yanan Zhang, and Bingjie Shi for their contributions and insights which greatly improved this manuscript. We are also grateful to J.Y. Chu for the comments and edits.

Appendix

Extended Research: Academic Dishonesty Due to Challenges from COVID-19

Looking at the data from March 2021 to March 2022, we found that 67.9% of students, more than two thirds of total students who were dismissed in 2022, were dismissed due to academic dishonesty. After analyzing the root causes of academic dishonesty, the results show that the major reason was related to how education was radically and suddenly changed due the COVID-19 pandemic. Since the explosion of COVID-19, universities have transitioned from in-person courses to online courses which required new ways of learning that students were underprepared for. The students in our data set did not adapt well to the new environment and were not able to stay focused on studying in this new artificial setting. More importantly, without supervision from instructors, students felt that the risk of being caught for academic dishonesty was low.

Figure 3-1 Types of academic dishonesty for students who were dismissed in 2021

Figure 3-2 Types of academic dishonesty for students who were dismissed in 2022

Cheating

As seen in Figure 3-2, the proportion of students dismissed for cheating in 2022 was 39.6%. Despite a 7.3% decrease compared to 2021, it is still the highest among all academic dishonesty behaviors. Common cheating behavior includes working collaboratively during exams, purchasing or selling answers or other materials for exams, copying exams from others or allowing others to copy, using calculators, mobile devices, and other unauthorized devices.

Without supervision from instructors and with ready access to the internet, cheating was an easy option for students who lacked self-discipline. In order to ensure academic honesty, schools have developed and implemented new tools for identifying cheating and plagiarism with some schools collaborating with online service providers to monitor students' academic behaviors. Through such monitoring due to the virtual learning environment, students who may have successfully cheated in the past (e.g., through sharing answers or collaborative work) were more likely 'caught' given such new technologies.

Plagiarism

From March 2021 to March 2022, 44.5% of students were dismissed due to plagiarism. As compared to the previous period from March 2020 to March 2021, the proportion has slightly increased from 40.1% to 44.5%. Although there might be slight differences in the definition of plagiarism among different universities, the most commonly seen behaviors are submitting others' work as their own, copying others' work, and improper use of citation. Among those behaviors, our study showed that improper use of citation frequently caused Chinese international students to violate academic integrity policies. If students are not familiar with how and when to use citations, it can easily be labeled academic dishonesty, albeit unintentionally.

After transitioning to online courses after the pandemic, students were given more assignments and homework than usual. Because of time pressure and lack of self-discipline, plagiarism continues to be a growing problem which results in severe consequences. While a first plagiarism offense may lead to a warning or failing grades, the second offense is more likely to lead to a severe sanction, including but not limited to suspension and dismissal.

Asking others to complete academic activity

Asking others to complete students' assignments is another common reason for violations, accounting for 7.3% of students who were dismissed due to academic dishonesty. This number is steady as compared to last year's 8.3%. This year, again, it has become a hot topic within Chinese international student communities. Online courses are not suitable for all students. Therefore many students were not able to follow the progress of classes and fell behind. The growing industry of providers who will complete assignments on a students' behalf aggressively advertise their success while also minimizing the consequences of academic dishonesty, attracting students who not only lack discipline but also, who have fallen behind and seek this solution out of desperation.

Despite this industry purporting to ‘help’ students, it remains purely profit driven. The work they provide students has often been used somewhere else and submitted repeatedly. Sometimes several students may use the same service providers with the same writer and similar writing style. Without any original work, such offenses are easily detectable, and the consequences of hiring someone else is considered a severe academic integrity violation, often resulting in serious sanctions such as suspension and dismissal.

Hiring others to take exam

After analyzing the data in 2022, we found that 1.6% of students were dismissed due to hiring others to take exams. In 2021, roughly 2.8% of students were dismissed for the same reason. Similar to hiring others to complete assignments, it has its own industry. The students in our data set who were willing to pay for this service believed the chance of being caught would be much smaller for an online exam than an in-person exam. However, what students neglected to account for is how computer technology has advanced, and how instructors prepared for online learning can easily track IP addresses to ‘see’ the test taker and root out who is truly taking the exam. Just like with any other academic dishonesty violation, the consequences could be severe.

Others

Besides what has been mentioned above, other behaviors leading to academic dismissal include falsifying documents or sabotaging peers’ work, accounting for 7.0% of academic dishonesty dismissals. Falsifying documents can manifest itself in a number of ways, from the submission of fraudulent materials/transcripts to hiding aspects of one’s academic record, not being completely forthright during entrance interviews, submitting an application essay written by someone else, or submitting fake standardized test scores or diplomas. Dishonesty in any way during the application procedure is unfair to other students and is in direct violation of all schools’ policy. Even if falsified application materials were submitted by the student’s agent/educational consultant, it becomes a serious problem for the student’s academic career and can lead to dismissal once discovered, possibly affecting students F-1 status.

Examples of Dismissal Cases due to Academic Dishonesty

Case One: Academic Dishonesty Due to Citations

Student Z studied at a university in California. He was caught plagiarizing online resources in his homework without properly using citations and was reported to the Office of Academic Conduct. As a result of the investigation, Student Z admitted that he did not realize copying and pasting material from a website without proper citation was considered plagiarism. While the instructor allowed students to use online resources as reference, it did not mean students could use it ‘as is’ without proper citations. Because it was his second academic dishonesty offense, he was facing a suspension from the university.

Case Two: Failure to Graduate Due to Plagiarism

Student G was a masters level student studying at a top 10 university, and he was caught plagiarizing during an online examination. In particular, he was reported multiple times throughout the exam for checking answers from the online textbook. The instructor was able to catch him through the browser history and reported him to the academic conduct committee. As a result, he was found in violation of academic honesty policies and was suspended.

Examples of Turning Things Around After Dismissal

Case One: Getting back on Track After Dismissal due to Poor Academic Performance

Student B was an undergraduate studying in the U.S.. Because of not having a good study plan, his GPA was below 2.0 for several consecutive semesters and he was dismissed due to poor academic performance. As a consequence, he had to transfer into another college to improve his academic performance through online courses. After an in-depth discussion with Student B about his situation, WholeRen analyzed the root causes of his academic performance issues and provided advice for his future academic career. WholeRen also designed a detailed and personalized academic plan for him. Afterward, Student B was able to apply for readmission and returned back to his original university to finish his studies.

Case Two: Admitted by Top 50 University after Suspension due to Academic Dishonesty

Student Y initially studied at a university based in California in the U.S. During his study, he was found to have engaged in academic dishonesty repeatedly. He was consequently suspended from the school for one year. After reaching out to WholeRen for help, he fully admitted his mistakes and understood the importance of academic integrity. Consequently, he was able to transfer to another college and continue his studies in the U.S. Following his transfer, he rectified his past mistakes and his study performance improved significantly, with all ‘A’ grades. In addition, he received support from WholeRen to prepare his graduate school application. With this support, he was successful in all of his classes. This lay the foundation for his successful admission to a well known university with a full scholarship.
